

Project Proposal

Project Purpose

my Project will be a website about the moon and it phases and any interesting things happing soon with it

The Audience

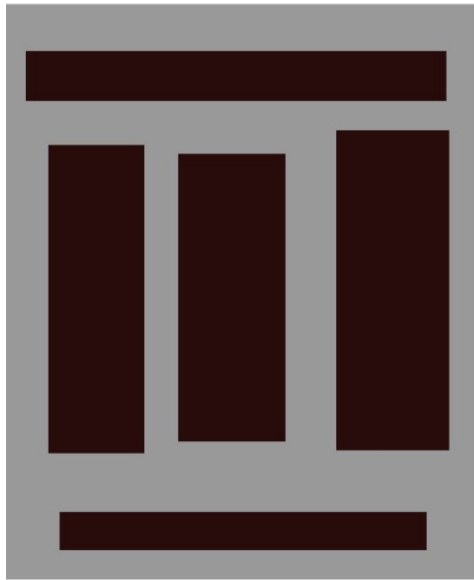

my audience is unmarred college students from 20-30 who live away from home and like the moon

Web Pages

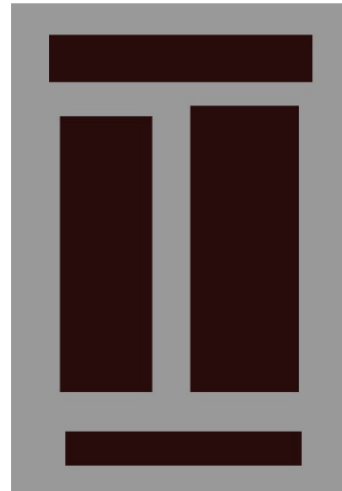

the web pages it will have are the home page, a page for cool moon picks , a page for stuff happening soon and a page for others to come and meat together to look at the moon.

Wireframe Sketches

tablit

moble

comuter

Usability Concepts

the usability concepts I will use will be good load time with small imgs and not bulky stuff .Will also have good font and contrast with such and no flash. The nav bar will look like a nav bar and be easy to use and change colors when the user hovers over it to be more usable .I will make the headers easy to use and limit content to be reliable.
